

Postify

Privacy Policy

Last Updated: February 1, 2026

Effective for all users of the Postify mobile application

This Privacy Policy describes how **ASHdeveloper** ("we," "our," or "us") collects, uses, and discloses information in connection with the **Postify** mobile application (the "App" or "Service"). By using Postify, you acknowledge that you have read and understood this Privacy Policy and consent to the data practices described herein.

1. Introduction

We collect and process information to provide, maintain, and improve the Service. By using the Service, you acknowledge this Policy and consent to the data practices described below. This policy covers all features of the Postify App, including LinkedIn profile optimization, AI content generation, job follow-up messages, post scheduling, job application tracking, and LinkedIn growth analytics.

2. Information We Collect

We collect various categories of information to provide, maintain, and improve our Service.

2.1 Personal Information

When you sign in with LinkedIn using OAuth 2.0 (OpenID Connect), we receive the following basic profile information from LinkedIn:

- Full name
- First name and last name
- Email address
- Profile picture / avatar
- Email verification status

Note: An internal subject identifier ("sub") is returned by LinkedIn's OpenID Connect endpoint and is used solely to associate your session with your account. It is not displayed to you or shared with any third party.

2.2 LinkedIn Growth Statistics

After signing in, users may manually enter their LinkedIn performance statistics to track their growth over time. This includes:

- Number of connections
- Profile view counts
- Average post impressions

Note: These statistics are entered manually by the user and are not automatically fetched from LinkedIn. They are stored locally on your device using SQLite (Room database) solely to provide the LinkedIn growth tracking feature. This data is not transmitted to any server or third party.

2.3 Resume Data

When you use the resume upload feature, we collect and process information from your resume to generate an optimized LinkedIn profile. Your resume is sent to our AI service provider (OpenAI) which analyzes it and returns the following generated content, which is then stored in Firestore:

- LinkedIn Headline — AI-generated professional headline
- LinkedIn About / Summary — AI-generated profile summary

- LinkedIn Skills — AI-suggested list of professional skills
- LinkedIn Post — AI-generated sample LinkedIn post
- Resume Score — AI-evaluated resume quality score
- Summary Strength — Assessment of the resume summary
- User Role / Title — Identified job title or role
- Projects — Extracted project titles and descriptions
- Experience — Extracted work experience titles and descriptions

Important: Your resume file is sent to OpenAI solely to generate the above profile content. The generated output is stored in Firestore for your convenience. Resume data is never used for advertising or marketing purposes.

2.4 User-Generated Content

When you use the App to create, edit, or publish content, we collect and store the following:

- Manually written LinkedIn posts (text entered by the user)
- AI-generated LinkedIn posts (created via resume data or manual prompts)
- Post titles, body content, and associated metadata (creation date, status, preferences)
- Images uploaded by the user to enhance posts
- Image URLs (stored as Cloudinary paths referenced in Firestore)
- Draft posts and scheduled post content

Note: Text content is stored in Firestore. Images are stored in Cloudinary and their paths are referenced in Firestore. Content sent to our AI provider (OpenAI) for generation is processed solely to produce the requested output and is not used for any other purpose.

2.5 Job Follow-Up Messages

When you use the job follow-up feature, you paste or enter a job description. The App combines the job description with your previously processed resume data and sends both to our AI service provider (OpenAI) to generate a personalized, context-aware follow-up message. The generated follow-up message may be stored locally on your device for your reference. This data is used solely to provide the follow-up message generation feature and is never shared with third parties for advertising or marketing purposes.

2.6 Job Application Tracking

The App includes a job tracking feature that allows you to manage and monitor your job applications. All data for this feature is stored **locally on your device** using an SQLite database (Room) and is never transmitted to any server or third party. Data collected includes:

- Job title and company name
- Company logo URL (if available)
- Job location, job type (Full-time, Part-time, Contract, Internship, Freelance)

- Work mode (Remote, Hybrid, On-site)
- Salary range (optional)
- Job description and job URL (optional)
- Application date and current status (Applied, Under Review, Phone Screen, Interview, Technical Round, Final Round, Offer Received, Accepted, Rejected, Withdrawn)
- Recruiter name, email, and phone (optional)
- Interview date and follow-up date (optional)
- Reminder settings
- Personal notes and comments

Note: All job tracking data is stored exclusively on your local device using SQLite (Room database). It is never uploaded to any server or shared with any third party. Uninstalling the App will permanently delete this data.

2.7 Scheduled Posts & Publishing

When you create or schedule a post, the following data is stored in Firestore and/or Cloudinary:

- Post title and description / body content
- Post type (text, image, etc.)
- Scheduled date and time (timestamp)
- Publishing status (e.g., scheduled, published, failed)
- Single or multiple image URLs (hosted on Cloudinary)
- Cloudinary public IDs for image management
- LinkedIn asset URN (returned after publishing to LinkedIn)

Note: Images are uploaded to Cloudinary. Image URLs and public IDs are stored in Firestore for reference. Images are uploaded as-is from your device gallery; we do not strip or process EXIF metadata before upload, so any metadata embedded in the image (such as device information) may be transmitted to Cloudinary.

2.8 Notification Data

The App stores and triggers the following types of notifications. Notification records are stored in Firestore and include:

- Notification ID and title
- Notification description / message
- Notification status and read/unread state
- Timestamp of the notification
- Associated image URL (if applicable)
- Associated post ID (if applicable)

The App triggers three types of notifications:

- **Post Updates** — Notifications about the status of your scheduled or published LinkedIn posts
- **LinkedIn Growth Stats** — Reminders to update or review your LinkedIn growth statistics
- **Job Tracking Reminders** — Notifications for scheduled job interviews, follow-up dates, and application reminders set by the user

2.9 Usage and Diagnostic Data

We collect certain technical data automatically through Firebase Analytics and Firebase Crashlytics to monitor app performance and improve reliability:

- App crash reports and error logs (via Firebase Crashlytics)
- App performance and stability diagnostics
- General app usage patterns and feature interactions (via Firebase Analytics)

3. How We Use Your Information

We use the information we collect for the following purposes:

App Functionality: To provide all core features including LinkedIn sign-in, profile optimization, AI content generation, job follow-ups, post scheduling and publishing, job application tracking, and LinkedIn growth analytics.

AI Content Generation: Resume data and user-entered job descriptions are sent to OpenAI (ChatGPT API) to generate LinkedIn profile content, posts, and personalized follow-up messages.

Content Storage & Sync: User-generated content, scheduled posts, notification records, and resume-generated profile data are stored in Firestore for cloud synchronization.

Local-Only Storage: Job application tracking data and LinkedIn growth statistics are stored exclusively on your device using SQLite (Room database) and never uploaded to any server.

Image Storage: User-uploaded images are sent to Cloudinary for storage and delivery. Images are uploaded as-is from your gallery. EXIF metadata embedded in the image may be transmitted to Cloudinary along with the image file.

Authentication & Session Management: LinkedIn OAuth 2.0 is used for secure sign-in via WebView. Your LinkedIn access token and basic session/login state are stored in EncryptedSharedPreferences on your device.

Scheduled Notifications: The App triggers local device notifications for: (1) post publishing status updates, (2) LinkedIn growth stat entry reminders, and (3) job interview dates and follow-up reminders set by the user.

Analytics & Improvement: Firebase Analytics collects anonymized usage data to help us understand feature adoption and improve the App.

Crash Reporting: Firebase Crashlytics automatically collects crash reports and diagnostics to help us identify and resolve technical issues.

Advertising: Google AdMob displays non-personalized advertisements. A monthly subscription can be purchased via Google Play to remove all ads permanently.

Subscription Management: Google Play Billing processes subscription payments. Subscription status is stored solely to determine whether ads should be displayed.

4. App Permissions

The App may request the following device permissions to enable core functionality. You can manage or revoke permissions at any time through your device settings.

Permission	Purpose
Photos / Media / Files	Required to select and upload images from your device gallery to enhance LinkedIn posts. Images are uploaded to Cloudinary as-is.
Notifications	Used to send local notifications for post publishing updates, LinkedIn growth stat reminders, and job interview / follow-up reminders.
Internet Access	Required for LinkedIn OAuth sign-in (via WebView), AI content generation (OpenAI API), Firestore data sync, Cloudinary image upload, AdMob ads, and publishing posts to LinkedIn.
WebView (LinkedIn OAuth)	An in-app WebView is used exclusively for the LinkedIn OAuth 2.0 sign-in flow. Session cookies used during this flow are managed by the WebView and are not stored or shared by the App.

5. Third-Party Services

We integrate the following third-party services to operate and improve Postify. Each service processes data in accordance with its own privacy policy. We recommend reviewing these policies to understand their data practices.

AI Content Generation

- **OpenAI (ChatGPT API)** — Processes resume data and user-entered prompts to generate LinkedIn profile content, posts, and job follow-up messages. Data is sent securely and used only for the requested generation task.

Analytics

-
- **Firebase Analytics** — Collects anonymized app usage data to help us understand user behavior, monitor feature adoption, and improve the App.

Crash Reporting

- **Firebase Crashlytics** — Collects crash reports and diagnostic data to help us identify and resolve technical issues and improve App stability.

Cloud & Data Storage

- **Firestore / Firebase** — Stores user-generated content, post data, resume-generated suggestions, LinkedIn growth stats, job tracking data, and app preferences.
- **Cloudinary** — Stores and delivers user-uploaded and AI-generated images. Image URLs are stored in Firestore for reference within the App.

Advertising

- **Google AdMob** — Displays non-personalized advertisements to users without an active subscription. AdMob may collect the Google Advertising ID (GAID) and device information for ad frequency capping, fraud prevention, and aggregated reporting. Ads are served without behavioral profiling. Users can opt out via: Device Settings → Google → Ads → Delete Advertising ID or Opt out of Ads Personalization. Purchasing a subscription removes all ads permanently.

Authentication & Publishing

- **LinkedIn (OAuth 2.0 via WebView)** — Used for secure sign-in via an in-app WebView and to publish posts directly to LinkedIn on your behalf. Session cookies during sign-in are handled by the WebView only and are not stored by the App. Your LinkedIn access token is stored securely in EncryptedSharedPreferences on your device.

Payments

- **Google Play Billing** — Processes monthly subscription payments to remove ads. We do not directly handle or store any payment card information. All payment processing is managed securely by Google Play.

6. How We Share Your Information

We respect your privacy and only share your data where strictly necessary to operate the Service.

6.1 Service Providers

We share limited data with trusted service providers that help us operate the App, including:

-
- **OpenAI (ChatGPT API)** — Receives your resume content and job descriptions to generate LinkedIn profile content, posts, and follow-up messages. Per OpenAI's API policy, data submitted via the API is not used to train OpenAI models by default. See openai.com/privacy for details.
 - **Firebase / Firestore (Google)** — Stores structured user data including posts, scheduled posts, notification records, and resume-generated profile content. Job tracking and LinkedIn stats are stored locally only and never sent to Firestore.
 - **Cloudinary** — Stores and serves user-uploaded images along with any EXIF metadata embedded in the uploaded files.
 - **Google AdMob** — May collect the Google Advertising ID (GAID) to display non-personalized ads to users without a subscription.
 - **Google Play Billing** — Processes subscription payments securely. We do not receive or store payment card details.
 - **LinkedIn** — Receives your OAuth access token (stored in EncryptedSharedPreferences) and post content when you publish directly to LinkedIn from the App.

6.2 LinkedIn Integration

When you sign in with LinkedIn or publish content through the App, certain information (such as your name, email address, profile picture, and post content) is shared with LinkedIn to enable authentication and publishing functionality, in accordance with LinkedIn's privacy policy.

6.3 Legal Requirements

We may disclose your information when required by law, legal process, litigation, or a valid governmental request, or when necessary to protect our rights, property, or the safety of our users.

We do not sell your personal information to any third party, and we never share your data for advertising purposes beyond what is described in this policy.

7. Subscription & Payments

Postify is free to use. The App displays advertisements to all users via **Google AdMob**. Users may purchase a monthly subscription through **Google Play Billing** solely to remove advertisements. The subscription does not unlock any additional premium features.

- We do not directly collect, store, or process payment card information.
 - All billing, invoicing, and payment security is managed by Google Play.
 - Subscription status (active or inactive) is stored only to determine whether ads should be displayed.
 - Cancelling your subscription will re-enable advertisements in the App.
 - Refund requests are handled in accordance with Google Play's refund policy.
-

8. Your Privacy Rights

Depending on your jurisdiction, you may have certain rights regarding your personal information. You may exercise these rights by contacting us at developerashraf13@gmail.com.

Right	Description
Access	You may request access to all personal data we hold about you, including profile information, resume data, generated content, job tracking records, and LinkedIn stats.
Deletion	You may request deletion of all your data, including personal information, user-generated content, images, resume data, and job tracking records, subject to applicable legal obligations.

To exercise any of these rights, please contact us at developerashraf13@gmail.com. We will respond in accordance with applicable data protection laws within a reasonable timeframe.

9. Data Security

We implement industry-standard technical and organizational security measures to protect your information from unauthorized access, disclosure, alteration, or destruction.

- **Encryption in Transit:** All data transmitted between the App and servers uses HTTPS/TLS protocols.
- **Firestore Encryption:** Data stored in Firestore benefits from Google's built-in server-side encryption at rest.
- **Cloudinary Encryption:** Images stored in Cloudinary are protected by Cloudinary's built-in encryption and access controls.
- **EncryptedSharedPreferences:** Your LinkedIn access token, login state, and app preferences are stored locally using Android's EncryptedSharedPreferences (AES-256 encryption), ensuring sensitive data is never stored in plain text on your device.
- **Local SQLite Database:** Job tracking and LinkedIn growth stats are stored in a local SQLite (Room) database on your device, protected by Android's app sandboxing. This data is only accessible to the Postify app and is never transmitted to any server.
- **Firestore Security Rules:** Strict Firestore security rules ensure each user can only access their own data.
- **LinkedIn OAuth Security:** Sign-in uses the industry-standard OAuth 2.0 protocol via a secure WebView. We never store your LinkedIn password.
- **OpenAI Data Processing:** Data sent to OpenAI is processed under OpenAI's API usage policies. OpenAI does not use API data to train their models by default. We recommend reviewing OpenAI's

privacy policy at openai.com/privacy.

- **EXIF Metadata Notice:** Images uploaded from your gallery may contain embedded EXIF metadata (such as device model or capture settings). This metadata is transmitted to Cloudinary as part of the image file. We do not actively process or store EXIF data separately.
- **Crash Monitoring:** Firebase Crashlytics monitors for unexpected failures to help us resolve issues quickly.
- **Secure Payments:** All payment processing is handled exclusively by Google Play Billing. We never store payment card details.

While we strive to protect your information, no method of transmission or electronic storage is 100% secure. We are committed to protecting your data to the best of our ability and will notify affected users in the event of a data breach as required by applicable law.

10. Data Retention

We retain your personal information only for as long as necessary to fulfill the purposes outlined in this Privacy Policy, unless a longer retention period is required or permitted by law.

- **Account & Profile Data:** Retained in Firestore while your account is active.
- **User-Generated Content:** Posts, drafts, and scheduled content stored in Firestore until deleted by you.
- **Resume-Generated Data:** AI-generated profile content stored in Firestore until deleted by you.
- **Job Tracking Data:** Stored locally on your device (SQLite). Deleted when you remove entries or uninstall the App.
- **LinkedIn Growth Stats:** Stored locally on your device (SQLite). Deleted when you remove entries or uninstall the App.
- **Images (Cloudinary):** Retained until you delete the associated post or your account.
- **Analytics & Crash Data:** Retained per Firebase's standard data retention policies.
- **Subscription Status:** Retained only while needed to manage ad display settings.

When your data is no longer needed, it will be securely deleted or anonymized. You may request deletion of your personal information at any time by contacting us at developerashraf13@gmail.com.

11. Children's Privacy

Postify is intended for users aged **18 and older**. It is not directed at children under the age of 13 (or the applicable age of digital consent in your jurisdiction). We do not knowingly collect personal information from children.

If we become aware that we have inadvertently collected personal information from a child without verifiable parental consent, we will take prompt steps to delete that information. If you believe we have collected information from a child, please contact us immediately at **developerashraf13@gmail.com**.

12. Legal Compliance

This Privacy Policy is designed to comply with applicable data protection laws and regulations, including:

- **GDPR** (General Data Protection Regulation) — For users in the European Economic Area.
 - **CCPA** (California Consumer Privacy Act) — For California residents.
 - **Google Play Developer Policy** — All data safety and privacy requirements as mandated by Google Play.
 - **Other Applicable Laws** — We comply with data protection laws in all jurisdictions where we operate.
-

13. Changes to This Privacy Policy

We may update this Privacy Policy from time to time to reflect changes in our practices, technology, legal requirements, or new features added to the App. When we make material changes, we will update the "Last Updated" date at the top of this policy and, where appropriate, notify you through the App.

Your continued use of the App after any changes to this Privacy Policy constitutes your acceptance of the updated terms. We encourage you to review this policy periodically.

14. Contact Information

If you have any questions, concerns, or requests regarding this Privacy Policy or our data practices, please contact us:

Developer: ASHdeveloper

Email: developerashraf13@gmail.com

We will make every effort to respond to your inquiry in a timely manner and within any timeframes required by applicable law.
